

What is ASP.NET MVC Folder Structure?

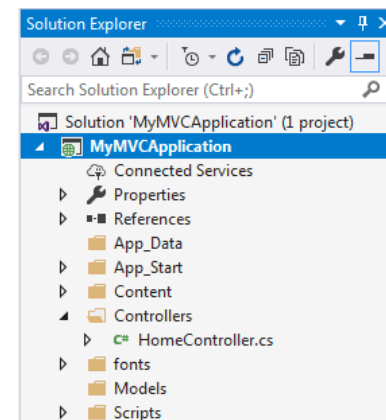

The structure of the ASP.NET MVC application by default.

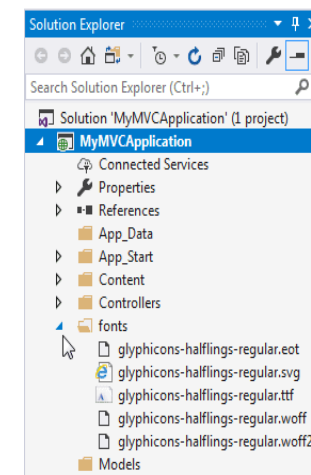

The App_Start folder can contain class files that will be executed when the application starts.

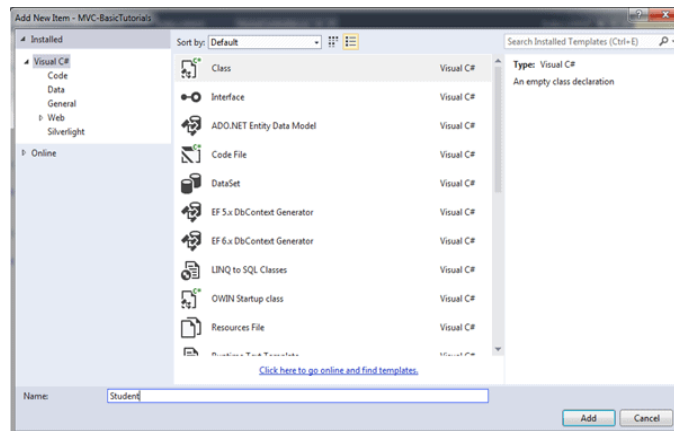

The Content folder contains static files like CSS files, images, and icons files.

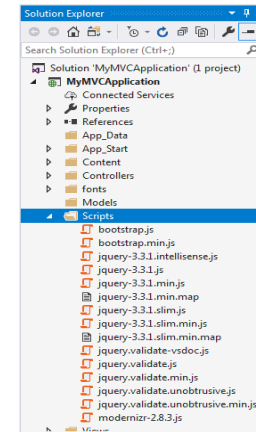

A Controller handles users' request and returns a response.

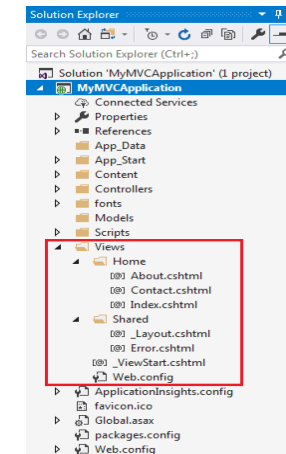

The Fonts folder contains custom font files for your application.

The Models folder contains model class files. Typically model class includes public properties, which will be used by the application to hold and manipulate application data.

The Scripts folder contains JavaScript

The Views folder contains HTML files for the application. Typically view file is a .cshtml file where you write HTML and C# or VB.NET code.
